

## **ABSTRACT OF THE DISCLOSURE**

### **ORIGIN DEVICE BASED CALLEE IDENTIFICATION**

5        A method, system, and program for origin device initiated callee identification are provided. At an origin device, a voice utterance of a callee is detected from a destination device. A callee identity associated with the voice utterance is identified at the origin device, such that the callee identity is transmittable as an authenticated identity of the callee for a call. A caller may select whether to continue a call dependent upon whether the callee identity is preferable. In  
10        addition, an intermediary device may receive the callee identity and specify services available during the call according to the callee identity.
